

Please reject 04-160. It is very beneficial for satellite radio to broadcast traffic and weather to all of us, even when we don't live in the metro areas whose traffic is detailed. It is beneficial when planing a trip to Chicago, for instance, to listen for a few days beforehand and get an idea of where the tie ups are and troublespots.

However, my larger concern is with the implication that content (not obscene) should be regulated on broadcast radio. Let the market decide and make the local redio stations feel the pressure to perform and provide the superior service. Competetion breeds quality.
